Chandrayaan-2

Developed by the Indian Space Research Organisation (ISRO), the mission was launched from the second launch pad at Satish Dhawan Space Centre on 22 July 2019 at 2.43 PM to the Moon by Geosynchronous Satellite Launch Vehicle Mark III. The planned orbit has a perigee of 170 km and an apogee of 45475 km. It consists of a lunar orbiter, a lander, and a lunar rover named *Pragyan*, all developed in India. The main scientific objective is to map the location and abundance

of lunar water. The lander and the rover will land on the near side of the Moon on 7 September 2019. It can relay data to Earth through the Chandrayaan-2 orbiter and lander, which were launched together on the same rocket. A successful landing would make India the fourth country to achieve a **soft landing on the Moon**, after the space agencies of the **USSR**, the **USA** and **China**. If successful, Chandrayaan-2 will be the southernmost lunar landing, aiming to land at 67°S or 70°S latitude.

“Failure will never overtake me if my determination to succeed is strong enough”.
